

Claim Amendments:

This listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Currently Amended) An apparatus comprising:

a wireless wide area network telephone interface to couple to a wireless wide area network telephone;

a transceiver to communicate with a wireless local area telephone, to receive data related to an outgoing text message from the wireless local area telephone; and

a first control module to transfer the data related to the outgoing text message a call received at the ~~wireless wide area network telephone interface~~ to the transceiver to the wireless wide area network telephone for transmission of the outgoing text message;

wherein the apparatus does not require a landline telephone connection, when a wireless wide area network telephone is coupled to the wireless wide area network telephone interface, wherein the wireless wide area network telephone comprises a first display, and wherein information associated with the call is displayed on the first display;

a universal serial bus (USB) interface to communicate with a first type of external device; and

a second data interface of a second type to communicate with a second type of external device.

2. (Canceled)

3. (Currently Amended) The apparatus of claim 1, wherein the wireless local area telephone comprises a wireless local area handset adapted to send data related to an outgoing text message to the transceiver.

4. (Currently Amended) The apparatus of claim 1, wherein the wireless local area telephone comprises a second display to display text related to the outgoing text message.

5 - 8. (Canceled)

9. (Currently Amended) The apparatus of claim 1, wherein the wireless wide area network telephone is a Personal communication services (PCS) [[PCS]] telephone.

10. (Currently Amended) The apparatus of claim 1, further comprising:
a speaker;
a second control module to communicate an incoming voice portion of [[the]] a call
received at the wireless wide area network telephone interface to the speaker.

11. (Currently Amended) The apparatus of claim [[1]] 10, further comprising:
a microphone; and
the second control module to provide an outgoing voice portion received at the
microphone to the wireless wide area network telephone interface.

12. (Currently Amended) The apparatus of claim 11, further comprising an alphanumeric keypad to receive input related to an outgoing text message; and a display responsive to the alphanumeric keypad to display input received via the alphanumeric keypad.

13 - 17. (Canceled)

18. (Original) The apparatus of claim 1, further comprising a battery charger for charging a battery in the wireless wide area network telephone.

19. (Original) The apparatus of claim 1, further comprising:
a battery charger for charging a battery in the wireless wide area telephone; and
a battery charger for charging a battery in the wireless local area telephone.

20. (Canceled)

21. (Currently Amended) The apparatus of claim 1, further comprising at least one universal serial bus (USB) interface to communicate with a first type of external device, wherein the first type of external device is a personal computer (PC), and wherein the first control module is adapted to receive data related to a communication from the PC via the USB interface and to send the data related to the communication to the wireless wide area network telephone.

22. (Currently Amended) The apparatus of claim 1, further comprising at least one universal serial bus (USB) interface to communicate with a first type of external device, wherein the first type of external device is a camera.

23. (Currently Amended) The apparatus of claim 1, further comprising at least one universal serial bus (USB) interface to communicate with a first type of external device, wherein the first type of external device is a personal data assistant (PDA).

24. (Currently Amended) The apparatus of claim 1, further comprising at least one universal serial bus (USB) interface to communicate with a first type of external device, wherein the first type of external device is a digital storage card.

25. (Currently Amended) The apparatus of claim 1, further comprising at least two universal serial bus (USB) interfaces to communicate with a first type of external device and a second type of external device wherein the second data interface is a universal serial bus (USB) interface.

26. (Currently Amended) The apparatus of claim 1, further comprising wherein the second data interface is a portable media reader and/or writer interface.

27. (Currently Amended) A method comprising:
receiving an ~~incoming call~~ outgoing text communication signal from a wireless ~~wide~~
local area network telephone at a base station;
initiating communication from the base station to a wireless ~~local~~ wide area network
telephone in response to receiving the ~~incoming call~~ outgoing text communication
signal, wherein ~~text of information associated with the call~~ outgoing text
communication is displayed at a display of the ~~wireless local area telephone when~~
~~the wireless wide area network telephone is docked at the base station;~~ and
communicating with an external device through a universal serial bus (USB) interface.

28 - 33. (Canceled)

34. (Original) The method of claim 27, further comprising communicating with an
external device through a second standardized interface.

35. (Original) The method of claim 34, wherein the second standardized interface is a
portable media reader/writer standardized interface.

36. (Original) The method of claim 34, wherein the external device is a digital storage
card.

37. (Currently Amended) A method comprising:
receiving an outgoing data call request signal at a base station from a wireless local area
telephone;
initiating from the base station a data call to be made from a wireless wide area network
telephone in response to receiving the outgoing data call request signal;
communicating with an external device through a universal serial bus (USB) interface;
and
displaying information associated with the data call on a display of the ~~wireless wide area~~
~~network telephone when the wireless wide area network telephone is coupled to~~
~~the base station.~~

38. (Original) The method of claim 37, further comprising charging the wireless wide area network telephone from the base station.

39. (Original) The method of claim 38, further comprising charging the wireless local area telephone from the base station.

40 - 41. (Canceled)

42. (Previously Presented) The method of claim 37, wherein the external device is a personal computer (PC).

43. (Previously Presented) The method of claim 37, wherein the external device is a camera.

44. (Original) The method of claim 37, further comprising communicating with an external device through a second standardized interface.

45. (Original) The method of claim 44, wherein the second standardized interface is a portable media reader/writer standardized interface.

46. (Original) The method of claim 44, wherein the external device is a digital storage card.

47 - 52. (Canceled)

53. (New) The apparatus of claim 1, further comprising a display to display text related to the outgoing text message.

54. (New) The apparatus of claim 1, wherein the first control module transfers data related to a data call received at the wireless wide area network telephone to the wireless local area telephone for display at the wireless local area telephone.

55. (New) The apparatus of claim 54, wherein the data call comprises an image, and wherein the image is displayed at the wireless local area telephone.

56. (New) The apparatus of claim 1, further comprising at least one data interface, wherein the first control module receives data related to an outgoing data message via the at least one data interface and transfers the data related to the outgoing data message to the wireless wide area network telephone for transmission.

57. (New) The apparatus of claim 56, further comprising a display to display data related to the outgoing message at the apparatus.

58. (New) The apparatus of claim 56, wherein the wireless local area telephone further comprises a display to display data related to the outgoing data message at the wireless local area telephone.

59. (New) The apparatus of claim 56, wherein the outgoing data message comprises an image.

60. (New) The apparatus of claim 56, wherein the outgoing data message comprises video content.

61. (New) The method of claim 27, wherein the base station does not include a connection for a telephone landline.

62. (New) The method of claim 27, further comprising:
receiving an incoming text communication signal from the wireless wide area network telephone at the base station; and
sending data related to the incoming text communication from the base station to the wireless local area telephone for display at the wireless local area telephone.

63. (New) The method of claim 27, further comprising:
receiving an incoming communication signal comprising an image from the wireless wide area network telephone at the base station; and
sending data related to the image from the base station to the wireless local area telephone for display at the wireless local area telephone.

64. (New) The method of claim 27, wherein communicating with the external device comprises:

receiving data related to a communication from the external device; and
sending the data related to the communication to the wireless local area telephone for display.

65. (New) The method of claim 64, further comprising initiating communication from the base station to the wireless wide area network telephone in response to receiving the data related to the communication, wherein wireless wide area network telephone transmits the communication.

66. (New) The method of claim 64, wherein the data related to the communication comprises an image.

67. (New) The method of claim 27, further comprising:
receiving input via a keypad at the base station; and
initiating a text communication from the base station to the wireless wide area network telephone based on the input.

68. (New) The method of claim 67, further comprising sending data related to the input to the wireless local area telephone for display.

69. (New) The method of claim 37, wherein the base station does not include a connection for a telephone landline.

70. (New) The method of claim 37, wherein the data call includes video data.

71. (New) The method of claim 37, wherein the data call includes data related to at least one image.

72. (New) The method of claim 37, wherein communicating with the external device comprises receiving data related to an image from the external device and sending the data related to the image via the wireless wide area network telephone.

73. (New) The method of claim 72, further comprising displaying the image at the wireless local area telephone.
